

How to add a static IP Address to a Mac OS X computer

1. Go to **System Preferences > Network**
2. Select the **Ethernet or Wi-Fi** option
3. In the **Configure IPv4** pull-down menu, choose **Manually** from the list of choices
4. Enter the information as it was given in your help ticket response. This information should include
 - A. IP Address
 - B. Subnet Mask
 - C. Router
5. Click the **Advanced...** button, then click the **DNS** menu option.
6. For DNS Servers, enter:
 - a. **209.58.180.215**
 - b. **198.7.62.199**
7. Check your work. Check it again. One tiny error will keep the computer from being able to get online.
 - a. Click **OK** or **Apply** to get all the way out of the configuration menus.
